Introduction

In Hadhramout and all Yemen, every day someone loses WhatsApp, Facebook page, or business due to hacking.
This book was written for YOU, the beginner, in simple language, no complexity.

After reading this book you will know:

- How to protect your accounts 100%

- How to detect fake phishing links

- How to protect your business from blackmail

Author: Mohammed Abdullah Masounaq - Researcher in Cyber Security - Seiyun, Hadhramout.

1. Phishing: Fake link looks like Facebook or Kuraimi Bank, asks you to login. If you login, they steal your data.
2. Social Engineering: Caller says I am from telecom company, give me WhatsApp code.

3. Ransomware: Word or PDF file encrypts all your files and asks for ransom.

Golden Rule: Never click link you don't know. Always check URL is https and correct domain.

Step 1: Enable Two-Step Verification:

WhatsApp > Settings > Account > Two-step verification > Set 6-digit PIN.

Facebook > Settings > Security > Two-Factor Authentication > Use Google Authenticator app.

Step 2: Never give 6-digit code to anyone, even if they say they are from WhatsApp.

Step 3: If hacked: Quickly logout from all devices, change password, inform friends.

Use different strong password for each account. Use free Bitwarden password manager.

If you have online store or page:

1. Use strong hosting + SSL certificate (green lock).

2. Update WordPress and plugins weekly.

3. Don't give admin panel to any programmer without contract.

4. Daily backup to Google Drive.

If website hacked: Disconnect immediately, change all passwords, scan with Wordfence.

Day 1-7: Change all passwords, enable 2FA on all accounts.

Day 8-14: Clean phone from suspicious apps, scan with Malwarebytes.

Day 15-21: Learn to detect phishing links. Send suspicious link to WhatsApp 777517760 for free check.

Day 22-30: Teach your family and employees same steps.

Remember: 100% protection impossible, but 99% possible if you apply this book.
